Where each implementation varies

Marceau-style star plots | eight shared outcomes per panel | identical log scales
Both x2c columns use ordinary threads in six workloads; thresholds are program-specific.

Apple M4 Max | local inputs | 12-sample fresh x2c medians; foreign references pinned | run 20261101T204543Z
One mark = one problem; spokes meet at the arithmetic centre (+). Grey marks show all 64 shared programs. Java includes startup/JIT.
