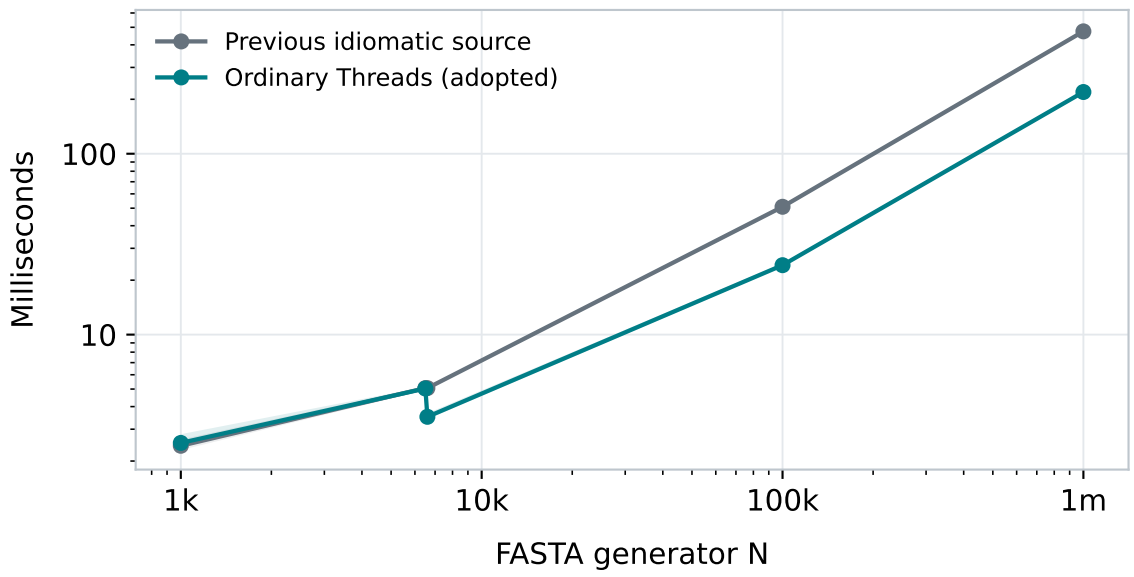
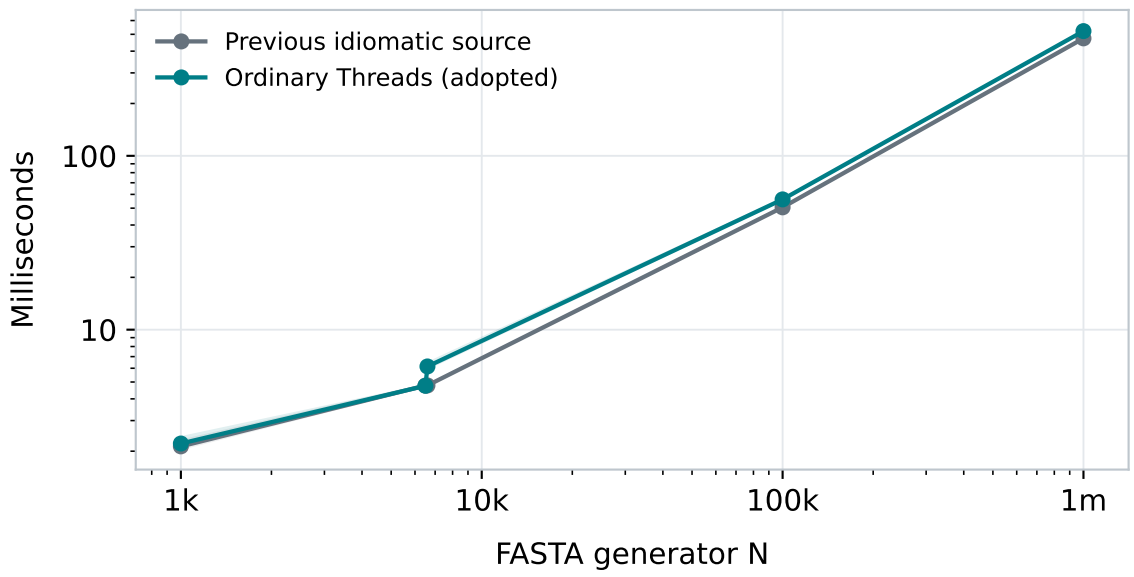
Three idiomatic source experiments

Quiet local and larger-input probes | 12 fresh-process samples per source/input
Medians and interquartile ranges; these probes are separate from the full calibration.

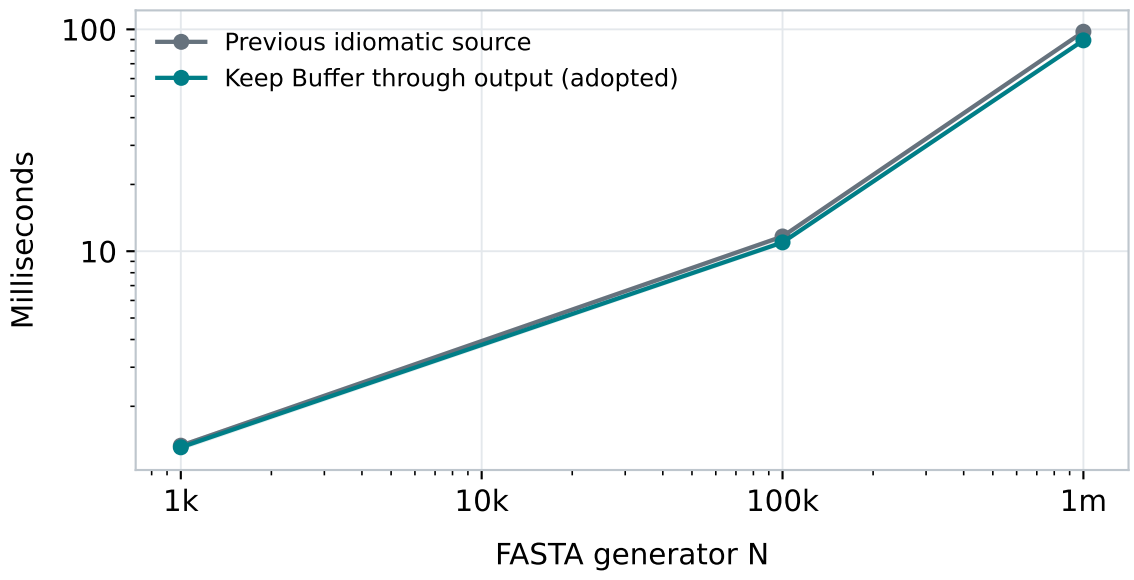
regex-redux | elapsed time



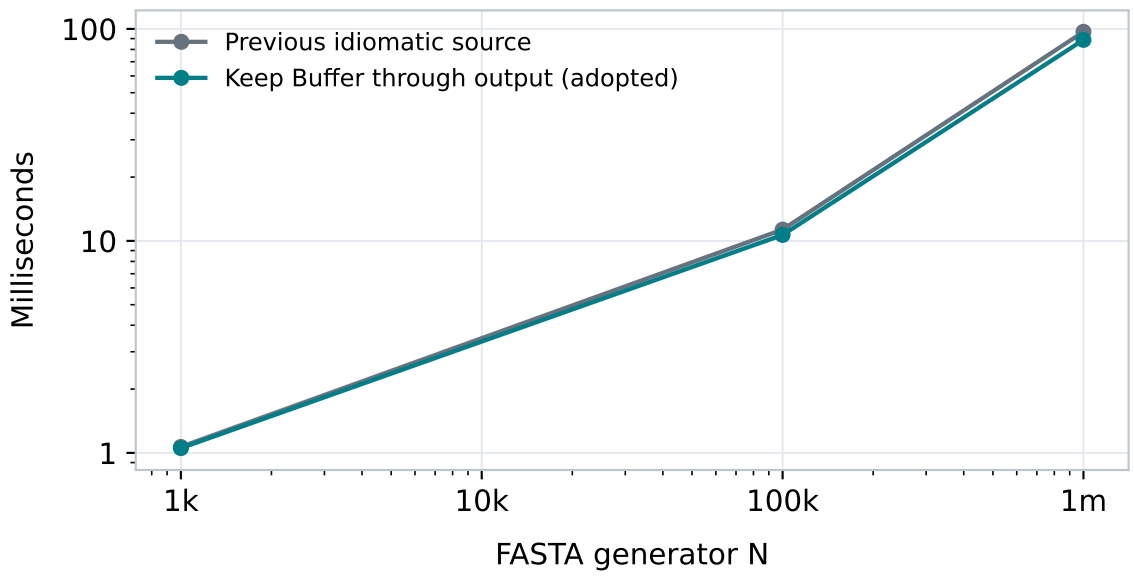
regex-redux | total CPU time



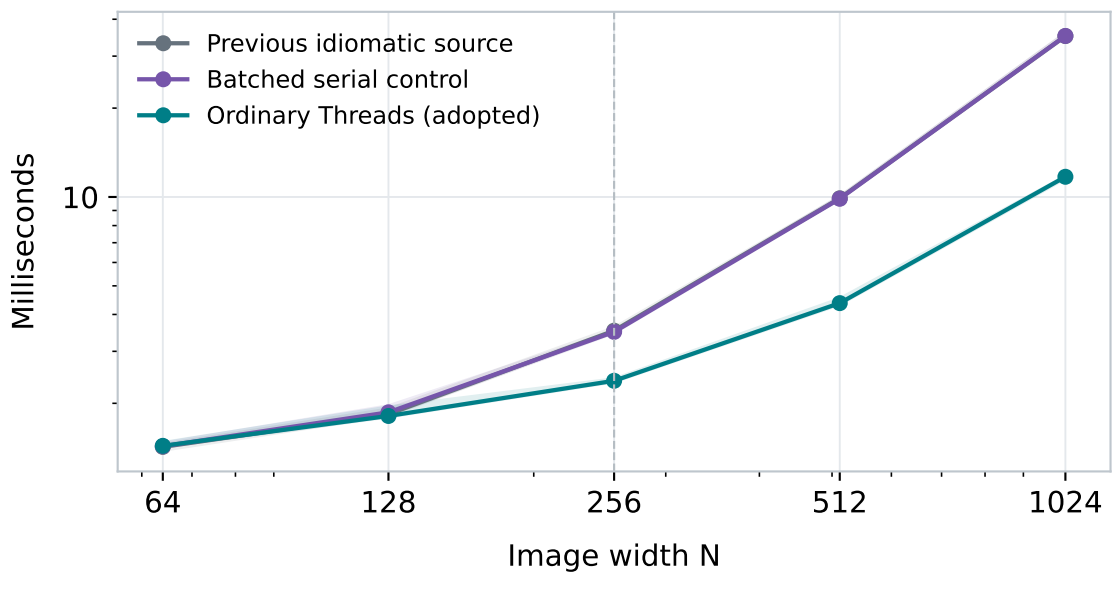
reverse-complement | elapsed time



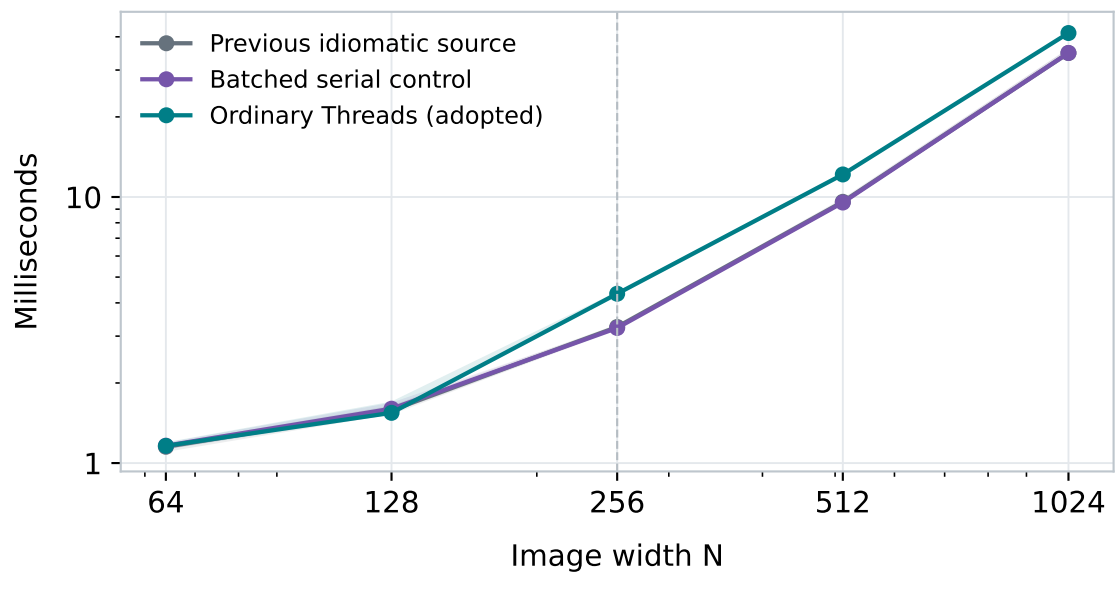
reverse-complement | total CPU time



Mandelbrot | elapsed time



Mandelbrot | total CPU time



Regex: serial below 65,536 cleaned bytes. Mandelbrot: serial below N=256; at most six 16-row batches.
CPU means user plus system time, including worker threads. Canonical-size timing remains unrun.
